

Elastic support  
with double adjustment  
(height and weight)  
for large tiles.  
Can be used with  
all types of professional  
manual tile cutters.

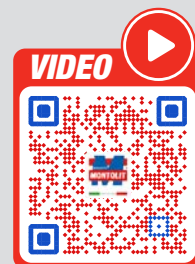

MIN  
5 cm  
2 inch

MAX  
8 cm  
3-1/4 inch

**100%**  
**MADE IN ITALY**

As tiles become larger and heavier, how can they be supported during delicate cutting operations? Brevetti Montolit respond to this need with **ATLAS**, the universal elastic support.

Thanks to its height adjustment, it fits perfectly with the best sellers professional tile cutters on the market, but the dominant feature that makes it a "unique product" is the possibility of compression adjustment: harder to support large or thick tiles, and softer for thin slabs or delicate ceramic tiles.

With **ATLAS**, the correct "support" of the tile on the incision plan, is guaranteed even in the case of overhang placements or off-center diagonal cuts, without any risk in terms of cutting quality and without forcing the operator into uncomfortable or non-functional positions. Designed to solve daily problems, it includes "smart" solutions that make it an essential accessory for all ceramic installers.

It's not just a simple "spacer," but a true progressive shock absorber that can be adapted according to technical needs. In addition to enabling proper tile positioning during the cutting phase, it allows the tile to descend at the moment of separation, providing the necessary elastic support to ensure the best result.

Many professional tile cutters are equipped with various types of supports or arms to accommodate and hold the tile, but current "big size" or thick ceramic formats have rendered them unsuitable or insufficient in size or support strength. Atlas definitively solves this problem. Thanks to its versatility, it can be used on the main professional machines currently on the market.

Made of fully recyclable ABS, it is practically indestructible against impacts and extremely resistant to atmospheric agents, this aspect is also very important for the protection of our planet; the longer it lasts, the less I replace, the less I pollute producing and recycling.

The sales package contains two spring-loaded supports with which it is possible to stably support all tile formats. Like many Brevetti Montolit products, **ATLAS** is covered by international patents.
